Problem Statement : Make an Application which can give legal assistance.

My soln → LAW-YAAR { Name of the application }

* Subbase : If someone's fund got siezed by government / other bank.
  Then he will come to our "application "LAW-YAAR?"
  & he will address his problem.

* LAW-YAAR work :-
  i) Then at first it will Recognise the language in which he typed the question or asked the question.
  ii) Now, as per the language, it will return solution in that language by giving following option to user :

These are the
4 option buttons
come to user.
as per their mode
of language & it
will speak out
the 4 options to user
as per their language

i] What are my Right as a user?

ii] How can I file a complaint?

iii] How can I acces legal ad service?
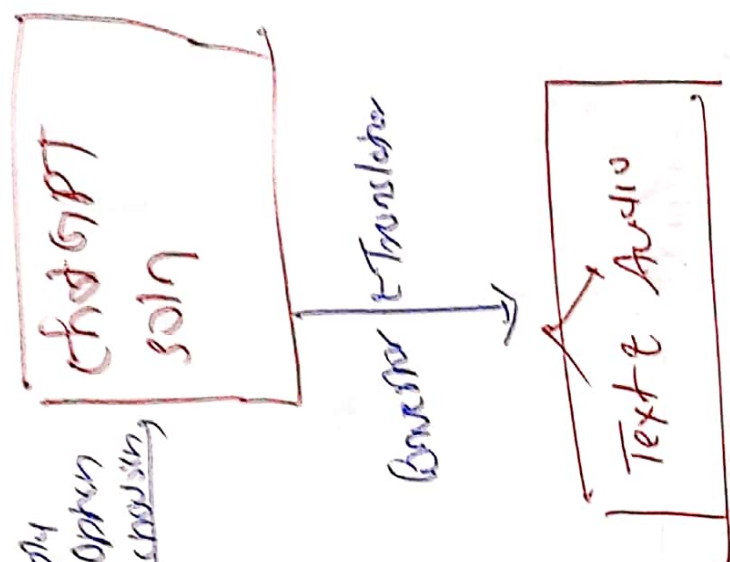

iv] How can I obtain legal document?

v] What are legal implication of perticular
action?

IV. Now as per the selected option by
user, it will respond me choose
them & speaking & writing

Now as per the selected option by
user answer by both speaking &
writing

v] If user still not satisfied then
he would have messaging Al and calling option
as we see in Amazon help.
service

How this would solve problem of people

1) It have multiple language response system by
which go well udspo ning

1) It can give answer in text

i) Even physically disable in → blind, deaf, can
ask their query

iv) We are adding legal advisor if problem user is
not satisfied by the chatbot help.

ChatGPT Soln

User

4 Option as per the language user

only multiple option user choosing

Convert t Translator → Text t Audio

Input → Text → Audio
Translator → Convert

If Not Satisfied with ChatGPT Advice
Then → Soln by legal advisor
